PRESS RELEASE

Budapest, 6 December 2016

---

## **Support to the European Commission's Fertilisers Regulation**

### **An open letter to MEPs**

CEEweb for Biodiversity, European Environmental Citizens Organisation for Standardisation and European Environmental Bureau have asked for MEPs' support the European Commission's proposal to revise Regulation (EC) 2003/2003 related to fertilisers.

The proposal aims to create a level-playing field between waste-based and traditional fertilisers through the harmonisation of national standards and requirements for fertilising products. It will help reduce major sources of soil and water pollution, improve food safety, reduce dependency on imported critical raw materials and drive innovation in the sector.

You may read the full letter [here](#).
