## **TENDER**

CEEweb for Biodiversity (1021 Budapest, Széher út 40., Hungary, registration no. 1634) makes this Tender for organizational services to be completed by 30th April 2021, to be started on 01<sup>st</sup> April 2020. Organisations and individual consultants are both eligible to apply.

Subject of the tender: Giving services on visualization of e-learning training, providing movie making services, including cutting and subtitling the short moves to be recorded for the e-learning course explanatory sessions.

Summary of tasks and activities to be performed: As part of the Interreg project "Restoring and managing ecological corridors in mountains as the green infrastructure in the Danube basin". (Acronym: ConnectGreen) WP5 Policy and networks working package on T3.3 E-learning course on eco-corridors should be developed.

The visualization of the E-learning platform must be set explanatory movies to be recorded with subtitles on Hungarian, Czech, Slovak, Romanian, Serbian to be ready to be up-loaded to the on-line platform.

"The E-learning training course will be developed for 2 target groups: one course on identification, management, monitoring of eco-corridors for conservationists and protected area staff, the other course on integrated of eco-corridors in spatial plans and related professional groups including authorities. At least 100 persons enrolled for the e-learning training course. Each course will contain 4-4 modules."

### **The expected result are:**

- 12 short (5-10 minutes) movies of the course topics - materials and presenter(s) provided by CEEweb,
- the above each 12 movies subtitled to Hungarian, Czech, Slovak, Romanian, Serbian – translations to be proofread by ConnectGreen native project partners, the required cooperation and communication with project partners will be supported/lead by CEEweb.
- Intro video of the platform (20-25 seconds long).

### **Requirements:**

- Work experience in
  - filming in studio,
  - cutting and subtitling.

**Timeframe:** The work should start in June 2020 and should be completed by 30th October 2020.

**office@ceeweb.org**  
**www.ceeweb.org**

Tender conditions and deadline:

The bid shall contain the price for the above tasks and a reference list of previous experiences in this field. Both individuals, private entities and consortiums are eligible to apply. Consultants submitting bids will be notified of the decision by 30th June 2020 the latest.

Organisations and consultants are invited to submit their bids by 29th June, 2020 latest, to:

Dr. Nagy Gabriella Mária

## **ANNEX 1 – Brief project description**

### **CONNECT GREEN**

#### **Restoring and managing ecological corridors in mountains as the green infrastructure in the Danube basin**

**Duration:** 1 June 2018 – 31 May 2021

**Budget:** ~ 2.5 Mio EUR, ~ 1,9 Mio EUR co-financed by the EU ERDF

**Lead Partner:** WWF International Danube-Carpathian Programme

**Project Partners:** Secretariat of the Carpathian Convention (AT), WWF Danube-Carpathian Programme Romania, WWF International Danube-Carpathian Programme (AT), **CEEweb for Biodiversity (HU)**, **Szent István University (HU)**, State Nature Conservancy of the Slovak Republic, SPECTRA – Centre of Excellence of EU – Slovak University of Technology in Bratislava, URBAN INCERC (RO), Piatra, Craiului National Park (RO), Slovak Environmental Agency (SK), Institute of Architecture and Urban&Spatial Planning of Serbia(RS), National Park Djerdap (RS), VUKOZ (CZ)

**Associated Strategic Partners:** Ministry of the Environment of the Czech Republic, **Bükk National Park Directorate (HU)**, Polish Ministry of Infrastructure and Construction, Romanian Ministry of the Environment, Romanian Ministry of Transport, Republic of Slovenia Ministry of Infrastructure

### **Project summary**

The Danube-Carpathian region is one of Europe's last remaining strongholds for the large carnivore species: gray wolf, Eurasian lynx and brown bear, protected under EU law. Unfortunately, the planned infrastructure developments threaten to cut through the movement corridors of large carnivores and increase the fragmentation of their habitats.

Very few spatial planners have the knowledge and experience to ensure that conflicts between development and nature conservation are minimized as they develop new plans. More importantly, legally binding mechanisms taking into consideration the requirements of functioning ecological corridors is poorly implemented, mainly because of the lack of reliable data. These effects require a coherent transnational approach as the large carnivores frequently move across state borders in search of food, mates or other needs.

Thorough ConnectGREEN project, partners from different countries and various fields of activity (spatial planning, research, government, biodiversity conservation) joined forces to increase the capacity of ecological corridors identification and management and to overcome

the conflict between infrastructure development and wildlife conservation. Valuable knowledge and experience will be made available to spatial planners and vice versa for finding the best ways to develop infrastructure and other plans in order secure ecological connectivity in the Carpathians.

Maintaining or restoring ecological corridors will secure a viable population of large carnivores in the Carpathians and maintain one of the largest biodiversity hotspots and functioning ecosystems on the continent. Moreover, this new joint approach is meant to accelerate the implementation processes and put into practice much-awaited infrastructure developments that faces the risk of being delayed due to non-conformity with safety and environmental standards.

### **Objectives**

The main objective of ConnectGREEN project for the next 3 years (2018 - 2021) is to maintain, respectively improve the ecological connectivity between natural habitats, especially between Natura 2000 sites and other protected areas of transnational relevance in the Carpathian ecoregion, namely in Czech Republic, Hungary, Romania, Slovakia, Serbia

### **Activities**

→ Developing innovative solutions and guidance to identify ecological corridors and connectivity gaps in a harmonized way across the Carpathian ecoregion to maintain long-term, cross-border wildlife movement, associated ecosystem services and a high level of biodiversity in the region.

→ Engaging protected area and Natura 2000 site managers, conservationists, spatial planners and other key stakeholders in an integrated approach for strengthening the capacity for identifying and managing ecological corridors.

→ Reconciling nature conservation and spatial planning and development in ecological corridors and Natura 2000 sites by identifying and implementing strategic directions and instruments and practices.

### **Project main outputs**

- Methodology for identifying ecological corridors
- State of the Art Report on the existing planning systems and their application for ecological corridor identification and management
- GAP analysis report on the identification of the needs for improving the planning processes and tools
- Set of recommendations developed together with spatial planners to avoid/ minimise fragmentation of ecological corridors and Natura 2000 sites
- Ecological connectivity related database under the CCIBIS
- Database with all relevant spatial information in each pilot site

- Maps with the distribution of target species, core areas, ecological corridors and critical barrier sites in each pilot areas
- Strategy on the identification, preservation and management of eco-corridors
- E-learning training course on eco-corridors
